EDUCATION

Georgia Institute of Technology
Atlanta, GA

Bachelor of Science in Computer Science

TECHNICAL SKILLS

Languages: Python, Java, C, C++, C#, Matlab, JavaScript, TypeScript, SQL (Postgres), HTML, CSS, R, LaTeX
Developer Tools: PyTorch, TensorFlow, scikit-learn, Git, GitHub Copilot, Docker, NodeJS, React, AWS, Arduino
IDE/PlatformIO, VS Code, IntelliJ, Figma

WORK EXPERIENCE

Full Stack Developer Intern

May 2024 – Aug 2024

Deluxe Corporation

Sandy Springs, GA

- Developed a critical debt collection and invoice service feature integrated with existing company software infrastructure in an Agile Scrum environment, leading to increased cross-functional efficiency between business and technology teams through \$4M estimated profit within first year of launch.
- Built REST APIs using C# and Swagger to integrate with PostgreSQL and internal software, enabling data retrieval and interaction with the database for the invoice SaaS.
- Designed and prototyped user interfaces in Figma, creating wireframes that ensured design consistency across the full-stack web application.

Robotics Research Assistant

Jan. 2023 – May 2024

Georgia Institute of Technology

Atlanta, GA

- Conducted human-robot interaction research investigating user trust, AI deception, and apology strategies, analyzing behavioral data using statistical methods to evaluate user experience outcomes.
- Co-authored and presented published research on human robot interaction and benefits to AI deception at the ACM/IEEE Conference on Human-Robot Interaction ([HRI](#)) and IEEE [RO-MAN](#).

PROJECTS

Assistive Home Robot (Stretch Robot) | ROS2, Python, Human-Robot Interaction

Jan. 2026 – Present

- Developing an AI-powered assistive robot using ROS2 and Python to autonomously navigate home environments and assist elderly users with daily tasks.
- Designing perception and decision-making modules that integrate real-time sensor input with adaptive behaviors to improve safety and usability.
- Implementing structured testing workflows and user-centered evaluation to iteratively improve system reliability.

RobosumoSim | Python, Gazebo, ROS2

Jan. 2026 – Present

- Contributing to a simulation platform for autonomous sumo robots, developing Gazebo arena environments and integrating robot models via URDF/SDF.
- Building automated test scenarios to enable repeatable, hardware-free validation of robot perception and decision-making behaviors.

Autonomous Minisumo Robot | C++, Embedded Systems, Controls

May 2025 – Present

- Designed and built an autonomous minisumo robot that placed Top 32 worldwide as the first U.S. entry in its category, the strongest Robosumo result from the U.S. to date.
- Implemented embedded control logic for real-time opponent detection, edge avoidance, and actuation; conducted iterative testing across firmware, electronics, and mechanical subsystems.

Computer Vision Object Identification | PyTorch, NumPy, Pandas, Matplotlib, OpenCV Jan. 2025 – May 2025

- Designed an end-to-end unsupervised ML pipeline for object identification covering data preprocessing, feature extraction, clustering, and model evaluation, achieving 75% classification consistency.
- Built evaluation scripts and visualization tooling to analyze model errors and iteratively refine clustering strategies.
